

## **Task Assignment**

Implement an application in Java capable of printing out two countries with the lowest and two countries with the highest standard VAT rate.

Input: <http://89.221.217.196:15500/countries>

## **Suggestions**

Keep it clean and simple (yet with a reasonable design allowing future extendibility), use any library of your choice, verify the program correctness, implement as a Maven or Gradle project, submit preferably as a GitHub repo link.
